Student Name: _____

Fall 2014
NC Final Exam
Physical Science

Student Booklet

Public Schools of North Carolina
State Board of Education
Department of Public Instruction
Raleigh, North Carolina 27699-6314

- 1 Which substance is **most likely** classified as a colloid?
- A soft drink
 - B oxygen gas
 - C water
 - D fog
- 2 Atoms of which two elements will form an ionic bond?
- A Mg and Cl
 - B N and O
 - C Fe and Co
 - D Rb and Al
- 3 Which compound will **most likely** be formed when lithium (Li) and nitrogen (N) are chemically combined?
- A LiN
 - B Li₃N
 - C LiN₃
 - D Li₃N₃

- 4 Which compound results from covalent bonding?
- A NH_4Cl
 - B K_2SO_4
 - C NaCl
 - D $\text{C}_6\text{H}_{12}\text{O}_6$
- 5 Why are beta particles able to penetrate objects better than alpha particles are?
- A because beta particles are larger than alpha particles
 - B because beta particles are smaller than alpha particles
 - C because beta particles are negatively charged, while alpha particles are neutral
 - D because beta particles travel in a straight line, while alpha particles travel in waves

- 6 This graph represents the cooling curve for a pure substance in a liquid state at $t = 0$ min.

Why does temperature remain constant from when $t = 2$ min to when $t = 5$ min?

- A because the substance absorbs heat energy as it changes from a liquid to a solid
- B because heat energy is released from the substance as it changes from a liquid to a solid
- C because heat energy is released from the substance as it changes from a liquid to a gas
- D because the substance absorbs heat energy as it changes from a liquid to a gas

- 7 This diagram represents a closed series circuit.

What would happen if the voltage were doubled?

- A The current would quadruple.
- B The current would double.
- C The current would remain constant.
- D The current would be reduced by half.
- 8 How would decreasing the diameter of the wires in a circuit influence the resistance and flow of electrons in the circuit?
- A It would decrease the resistance, causing fewer electrons to flow through the circuit.
- B It would increase the resistance, causing fewer electrons to flow through the circuit.
- C It would decrease the resistance by allowing more electrons to flow through the circuit.
- D It would increase the resistance by allowing more electrons to flow through the circuit.

- 9 How could the strength of an electromagnet be increased?
- A by reducing the length of the core of the electromagnet
 - B by using rubber material as the core for the electromagnet
 - C by decreasing the amount of current in the electromagnet
 - D by increasing the number of coils in the wires of the electromagnet
- 10 How does a step-down transformer alter the amount of voltage from a power line to a building?
- A It increases output voltage by increasing the number of wire turns in the secondary coil.
 - B It decreases output voltage by decreasing the number of turns in the secondary coil.
 - C It increases output voltage by decreasing the number of wire turns in the secondary coil.
 - D It decreases output voltage by increasing the number of turns in the secondary coil.

- 11 Student X pushes a 10-N box with a force of 2 N. At the same time, Student Y pushes the same box with a force of 6 N, but in the opposite direction. Which would **most likely** occur? (Ignore friction.)
- A The resultant force on the box would be 8 N.
 - B The resultant force on the box would be 18 N.
 - C The box will move toward Student X.
 - D The box will move toward Student Y.
- 12 A ball at rest is dropped and hits the ground in 1.5 s with a final speed of 15 m/s. How would the acceleration and final speed of the ball be affected if it were dropped from a greater height on Earth? (Ignore friction.)
- A Its final speed would remain the same because its rate of acceleration would remain the same.
 - B Its final speed would increase because its rate of acceleration would remain the same.
 - C Its final speed would remain the same because its rate of acceleration would decrease.
 - D Its final speed would increase because its rate of acceleration would increase.

- 13 This diagram represents a neutral atom of fluorine-19.

Which **best** describes the structure of fluorine-19?

- A 2 electrons in the first energy level; 7 electrons in the second energy level
- B 2 electrons in the first energy level; 8 electrons in the second energy level
- C 9 protons and 9 neutrons in the nucleus
- D 10 protons and 9 neutrons in the nucleus

RELEASED

This is the end of the Physical Science Released Items.

Directions:

1. Look back over your answers for the test questions.
2. Make sure all your answers are entered on the answer sheet. Only what is entered on your answer sheet will be scored.
3. Put all of your papers inside your test book and close the test book.
4. Place your calculator on top of the test book.
5. Stay quietly in your seat until your teacher tells you that testing is finished.
6. Remember, teachers are not allowed to discuss items from the test with you, and you are not allowed to discuss with others any of the test questions or information contained within the test.

 Fall 2014
 Answer Key

Item Number	Type ²	Key	Percent Correct ³	Standard
1	MC	D	30%	PSc.2.1.1
2	MC	A	49%	PSc.2.2.2
3	MC	B	50%	PSc.2.2.3
4	MC	D	23%	PSc.2.2.2
5	MC	B	35%	PSc.2.3.1
6	MC	B	48%	PSc.3.1.1
7	MC	B	64%	PSc.3.3.2
8	MC	B	34%	PSc.3.3.3
9	MC	D	61%	PSc.3.3.4
10	MC	B	30%	PSc.3.3.5
11	MC	C	58%	PSc.1.2.3
12	MC	B	16%	PSc.1.2.1
13	MC	A	76%	PSc.2.1.4

¹These released items were administered to students during a previous test administration. This sample set of released items may not reflect the breadth of the standards assessed and/or the range of item difficulty found on the NC Final Exam. Additional items may be reviewed at <http://www.ncpublicschools.org/accountability/common-exams/released-forms/>. Additional information about the NC Final Exam is available in the *Assessment Specification* for each exam located at <http://www.ncpublicschools.org/accountability/common-exams/specifications/>.

²This NC Final Exam contains only multiple-choice (MC) items.

³Percent correct is the percentage of students who answered the item correctly during the Spring 2014 administration.

RELEASED

Standard Descriptions

Only clarifying objective descriptions addressed by the released items in this booklet are listed below. A complete list of the North Carolina Essential Standards for Science and Social studies may be reviewed at <http://www.ncpublicschools.org/acre/standards/new-standards/>.

PSc.1.2.1 (Forces and Motion)

Explain how gravitational force affects the weight of an object and the velocity of an object in freefall.

PSc.1.2.3 (Forces and Motion)

Explain forces using Newton's Three Laws of Motion.

PSc.2.1.1 (Matter: Properties and Change)

Classify matter as: homogeneous or heterogeneous; pure substance or mixture; element or compound; metals, nonmetals or metalloids; solution, colloid or suspension.

PSc.2.1.4 (Matter: Properties and Change)

Interpret data presented in Bohr model diagrams and dot diagrams for atoms and ions of elements 1 through 18.

PSc.2.2.2 (Matter: Properties and Change)

Infer the type of chemical bond that occurs, whether covalent, ionic or metallic, in a given substance.

PSc.2.2.3 (Matter: Properties and Change)

Predict chemical formulas and names for simple compounds based on knowledge of bond formation and naming conventions.

PSc.2.3.1 (Matter: Properties and Change)

Compare nuclear reactions including; alpha decay, beta decay and gamma decay; nuclear fusion and nuclear fission.

PSc.3.1.1 (Energy: Conservation and Transfer)

Explain thermal energy and its transfer.

PSc.3.3.2 (Energy: Conservation and Transfer)

Explain simple series and parallel DC circuits in terms of Ohm's Law.

PSc.3.3.3 (Energy: Conservation and Transfer)

Explain how current is affected by changes in composition, length, temperature, and diameter of wire.

PSc.3.3.4 (Energy: Conservation and Transfer)

Explain magnetism in terms of domains, interactions of poles, and magnetic fields.

PSc.3.3.5 (Energy: Conservation and Transfer)

Explain the practical applications of magnetism.
